                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                P
```

```
A; Molecule type: protein
A; Residues: 1037-1042 < EERs.
A; Residues: 1037-1042 < EERs.
A; Residues: 1037-1042 above correspond to the carboxyl end of the protein
A; Note: residues 1037-1042 above correspond to the crippepide repeating unit (c) Comment: Most of the prolines at the third position of the trippepide repeating unit (c) Comment: Most of the prolines at the third position of the trippepide repeating unit (c) Comment: Pro-1002 is the only 3-hydroxyproline and the only hydroxylated propertion in pc c; Superfamily: collagen alpha 1(1) Chain; fibrillar collagen carboxyl-terminal homology; C; Keywords: coiled coil; extracellular matrix; glycoprotein; pyroglutamic acid; trimer; F; 1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ||||

A;Title: Expression of two nonallelic type II procollagen genes during Xenopus laevis (A)
     bovine
C;Comment: The order of the eight CNBr peptides in the alpha 1(I) chain of bovinu 9, 149, 268, and 217 residues.
2, 149, 268, and 217 residues.
2,Comment: The complete chain contains 1052 residues.
C;Superfamily: collagen alpha 1(I) chain, fibrillar collagen carboxyl-terminal hu C;Keywords: coiled coil; extracellular matrix, glycoprotein; pyroglutamic acid, E;1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
                                                                                                                                                                                                                                                                                         148

"Two mRNAs of mouse pro alpha 1(1) collagen gene differ in the size of the 3'-untranslated region.";
Nucleic Acids Res. 16:773-773(1988).
-!- FUNCTION: Type I collagen is a member of group I collagen
(fibrillar forming collagen).
-!- SUBUNIT: Trimers of one alpha 2(1) and two alpha 1(1) chains.
-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE OF 518-1128 FROM N.A.                -1- FUNCTION: Type I collagen is a member of group I collagen (fibrillar forming collagen).
-1- SUBUNIT: Trainers of one alpha 2(I) and two alpha 1(I) chains.
-1- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              . .)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   423
